

Analytic Data Solutions, LLC

Analytic Data Solutions, LLC is an IT solutions consulting company with a strong business orientation specializing in creating a comprehensive

Enterprise Analytic Environment (EAE) strategic roadmap or program plan. This roadmap, coupled with the foundational components of the business requirements and the architecture blueprint, provides the means to execute the appropriate sequence of projects achieving timely and business value-add analytic solutions.

As a small consulting firm, Analytic Data Solutions primary focus is in creating and aligning IT strategies and gathering business drivers/requirements that are typically performed in the beginning stages of an enterprise program initiative. By applying industry best practices and guiding principles in all Data Warehouse / Business Intelligence solution deliverables as well as leveraging existing technologies and processes, we ensure that the client's total investments are maximized and achieved.

Service Offerings

Planning Assessments – as no assessment is ever alike, it is important to listen and articulate the assessment needs of a client. However, there are common characteristics that apply to most assessments creating a consistent and efficient means to conduct effective assessments, such as:

- ☑ *Planning to develop and/or enhance your analytic environment*
- ☑ *Assessing your current environment for gaps and overall 'health' status*
- ☑ *Preparing for a system upgrade and/or performance (capacity) evaluation*

Metadata Management – determine and provide the appropriate processes and framework to create/manage metadata from both the IT and business perspectives.

Data Governance and Stewardship – assess and initiate the necessary framework and procedures to promote and execute a 'data governance' program.

Data Modeling and Architecture Oversight – assist in the creating/enhancement of analytic data models as well as provide oversight to analytic architecture adhering to best practices.

Quick Start Analytics (QSA) for Healthcare – reference architectures consisting of data models and report layouts contributing as a set of accelerators designed to shorten the development time and reduce project implementation costs.
